to the Architectural Profession

THE ARCHITECT today has many problems to solve, technicalities to master, developments to be familiar with, and trends to follow. It is not easy to keep abreast of changing conditions, to know the latest advances on every side of the architectural profession. Any information, therefore, which provides the architect, quickly and adequately, with an outstanding development in his field, should be most welcome.

This Album is designed to acquaint the architect and landscape architect with the many new applications of Dubois Woven Wood Fence. The rise to its present position of universal use by the leading members of the profession is due entirely to Dubois' demonstrated ability to solve difficult landscaping requirements.

Dubois owes its success to certain inherent attributes; its beauty, its adaptability, its rare

facility for harmonizing with all types of architecture, and its extraordinary durability. When to these is added its great economy and freedom from maintenance expense, it will be seen why architects everywhere have been quick to recommend it to their clients.

Because new uses for Dubois are constantly being discovered, we welcome photographs of unusual or especially charming installations, which will be used to supplement the illustrations in this album.

The views that follow suggest the enormous possibilities which this charming French fence offers to American Architects.

In the last pages of this book will be found data as to sizes and erection, which will make the specification of Dubois for any type of job a simple matter.

PRIVACY AND ARCHITECTURAL HARMONY ARE INSURED BY DUBOIS

USED *in* MANY WAYS *by* LEADING ARCHITECTS

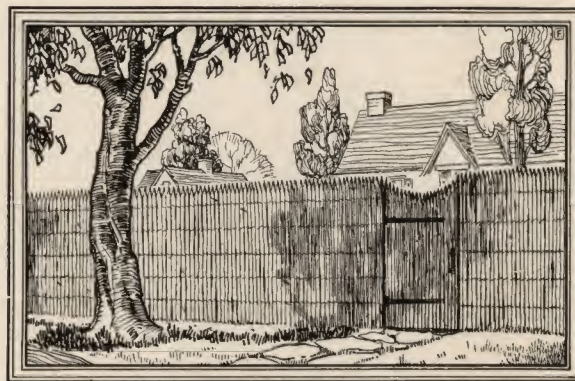

The fact that the foremost architects and landscape architects of this country are using Dubois as part of their landscaping schemes is conclusive evidence of its remarkable utility and practical features.

It is being used in a multitude of ways: to enclose an estate or garden, screen a laundry or service yard, provide a harmonious background for flowers and shrubs, bring safety and charm to city roofgardens, and shut out unwelcome views. Its use on golf courses is constantly increasing and it also

Heavy, rust-proof Copperweld wire is now used exclusively to bind the saplings.

serves as an enclosure for tennis courts, playgrounds, swimming pools and in many other ways. To architects, Dubois presents the one completely satisfactory answer to their problem of how to achieve privacy for an estate or garden without the sacrifice of beauty or architectural harmony.

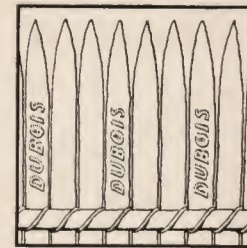

From outside, Dubois presents an even facade of sturdy saplings, uniformly straight and so closely woven that outsiders cannot see through.

For Dubois has a charm that is truly Old-World in character, and it blends with any style or period of architecture.

One of the principal advantages of specifying Dubois to complete

the ensemble of house and grounds is that it gives privacy immediately. There is no bare and ugly period of waiting for plantings to grow. And, unlike a hedge, Dubois never needs attention when once erected. Nor does it ever have to be painted. Its first cost is the last. This permanent freedom from unkeep expense will be more and more appreciated by your clients as the years roll by.

Dubois will last a lifetime. The first of it to be used in this country was erected on an estate at Westbury, L. I., in 1901, and is still in perfect condition and has never needed repairing. 30 years of service has only mellowed its beauty.

Genuine Dubois is branded on the back of every section for your protection.

SPECIFY "DUBOIS" BY NAME

SPECIFICATIONS *and* CONSTRUCTION

Dubois Woven Wood Fence is made in France where "Woven Wood" fences have been made for centuries, but in the case of Dubois, the specifications which have been laid down insure a much higher quality, uniformity and length of service than ever before.

The saplings in genuine Dubois are thoroughly seasoned and heat

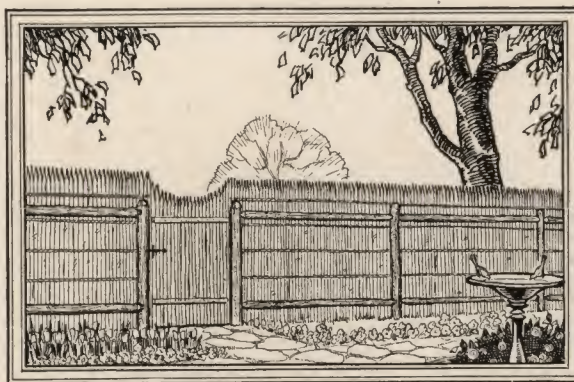

The posts are placed about 8 feet apart and connected top and bottom with 2" x 4" timbers or other cross rails. Then the sections of Dubois are nailed to this framework—an easy job for almost anyone.

treated before use, which prevents all possibility of warping. Also, the Copperweld wire which is used to bind the pickets is absolutely rustproof. Being

weatherproof and rustproof, Dubois never requires painting.

Dubois is imported from France in convenient sections five feet long. It comes in six heights: 18", 3'10", 4'11", 6'6", 8' and 10'. Gates to match are equipped with quaint iron hinges and latches. These gates come both single

The ready-cut, rustic framework harmonizes perfectly with Dubois, making its inside effect as attractive as it is from without.

and double (for driveways), with either straight or curved tops.

To obtain Dubois quality and Dubois dependability it is important that in ordering you clearly specify Dubois by name. The registered trademark Dubois is branded on the back of every section.

The sections of Dubois are easily erected by simply nailing them against a framework of posts set approximately 8 feet apart and connected by cross rails, top and bottom.

This framework can be purchased locally, or we can supply an attrac-

tive, rustic cedar framework, of mortised and tenoned posts and cross rails, finished to match the Dubois itself.

The Rustic Framework is supplied all ready to fit together.
